Company's New Branch in Bangalore

Data description:

In this project we have used data from various sources for extracting different information.

- Firstly, we extracted data for area names in Bangalore, INDIA with its average price per sqft in rupees. (https://www.makaan.com/price-trends/property-rates-for-buy-in-bangalore) We used plot section from this site as our project is about constructing new company.
- Secondly, we used foursquare api for extracting neighbourhood venues.
- And finally we used a json file for boundaries of each area in Bangalore from here- (https://raw.githubusercontent.com/datameet/PincodeBoundary/master/Bangalore/boundary.geojson).
